SNAL WIRE & LAPPET

SNAIL WIRE & LAPPET

紡績工場で生産される製品は、天然繊維から化学 繊維まで幅広い分野におよんでおります。

弊社では、お得意様の種々にわたるご要望に応えるべく、多型式のスネールワイヤーおよびラベットを製作しておりますので、ぜひご用命下さい。

Products from textile spinning mills cover a wide range of fibers from natural to chemical and synthetic. To respond to the versatile needs and demands of our customers in this field, we manufacture very many and varied types of snail wire and lappet. We are entirely at the service of our customers to meet their specific needs.

Type: Spiral (ウズ巻形)

	Hole Diameter	Spiral Direction	Material
	(穴 径)	(巻方向)	(材質)
Type:Spiral (カス(き)	2.5,3,4,5	z·s	SUS

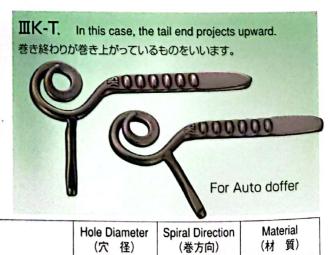

Type:P(P式)

	Hole Diameter	Spiral Direction	Material
	(穴 径)	(巻方向)	(材 質)
Type : P (P式)	2.5、3、4、5	Z	SUS

Type: IK (偏平形)

 $z \cdot s$

SUS

Type:IIK-F

Type:IIK-T

Type: Spiral-U (ウズ巻U形)

	Hole Diameter	Spiral Direction	Material
	(穴 径)	(巻方向)	(材質)
Type:Spiral-U (ウズ巻形)	2.5,3,4,5	Z·S	SUS

Type: P-U (P式U形)

	Hole Diameter	Spiral Direction	Material
	(穴 径)	(巻方向)	(材質)
Type:P-U (P式U形)	2.5,3,4,5	z	SUS

● 表面硬化処理 Surface Treatment (Hardening)

Material		hardening process	
(材 質)		(表面硬化処理)	
SUS	Stainless steel	Gas Nitro-carburizing	Hardness (硬度)
	(ステンレス鋼 13Cr)	(ガス軟窒化処理)	Hv1050~1250

特長

- 1.耐摩耗性、耐疲労性に優れています。
- 2.表面が非常に滑らかで強靱であります。
- 3.表面の金属組織そのものが変化しますので、硬質クロムメッキ等表面皮膜されたものに発生し易い剥離等の現象はおこりません。

Features

- 1. Excellent wear resistance and anti-fatigue properties
- 2. Very smooth and tough surface
- 3.Surface film peeling off (exfoliating) phenomenon, often associated with hard chromium plating processes, does not occur in the treatment of our snail wire, thanks to the gas nitro-carburizing treatment which changes the metal structure itself.

Lappet (ラベット)

樹脂ラペットの構造

Structure of Plastic Lappet

There are two types: the "gravity preventative type" and "spring attached type", to prevent the fall of the lappet. A plastic plate, with a rack screw in the center, is molded in one piece and is connected to the hinge. Its appearance is quite similar to the steel lappet.
